

Sound Transmission Class Doors (STC)

Excuse me? What's that you said? I'm sorry, can you please repeat that?

No, you are not losing your hearing. The reason you can't hear my conversation is that you are standing behind one of Algoma Hardwoods' Sound Transmission Class (STC) doors. And the good news? Now hear this. We've expanded our already broad range offering of STC rated wood doors. Sure we've got our standard STC 45, 43, 40, 39 and 28's. But now we've earned STC ratings for 33, 32 and 31 (with lite openings), expanding our offerings beyond our well established STC 28 fire-rated door. Please see the chart on the following page for specifics.

How about no added Urea-Formaldehyde? Well, we have addressed that. And, our STC 33, 32 and 28's can all be constructed to comply with the new LEED for Schools criteria. In fact, we can even prepare the door for lite openings and build it no added urea-formaldehyde. Algoma Hardwoods is committed to providing doors that are constructed to the most up-to-date LEED standard.

How About Collaborative for High Performance Schools (CHPS)?

We've addressed that too. Our doors have been tested by a third party laboratory to ensure their compliance with CHPS (Collaborative for High Performance Schools) for VOC emissions.

All of our doors have been tested to the strict standards defined by Riverbank Laboratories. This gives you the confidence that all of our STC rated doors will perform as specified.

Whether it's a school or military installation; government building or hospital, you are sure to find an Algoma Hardwoods' STC rated wood door that fits your project. Specify Algoma Hardwoods and you'll specify excellence.
